Examiner's Statement of Reasons for Allowance

The following is a statement of reasons for the indication of allowable subject matter: The art of record considered as a whole alone or in combination neither anticipates nor renders obvious, a coupler that is adapted to engage a cylindrical concave internal surface of a cylindrical opening of a torque receptor comprising: a shaft that rotates around a center axis, the shaft having at least two cam driving surfaces that are spaced substantially equally from the center axis and that are adapted to transmit torque applied to the shaft; at least two gripping shells having axial end portions and convex external gripping surfaces that have a cylindrical convex profile and that slidably engage the cylindrical concave internal surface, the gripping shells further including internal cam follower surfaces that are adapted to be engaged by the cam driving surfaces so that torque applied to the shaft is transmitted from the cam driving surfaces to the internal cam follower surfaces so that the center axis of the shaft is substantially aligned with the center axis of the cylindrical opening; and retaining recesses that axially and radially retain the gripping shells of the coupler adjacent the shaft and that allow the gripping shells to move freely in a radial direction and that allow the gripping shells to automatically engage the cylindrical concave internal surface of the cylindrical opening, together in combination with the rest of the limitations set forth in the independent claims.
